

IN THE CLAIMS:

1. (Currently Amended) A method comprising:

upon accessing content, displaying the content on a display screen in a first rendering mode,

collecting a selection of a second rendering mode,

showing the content according to ~~said~~ the second rendering mode,

collecting a request to close the content, and subsequently inquiring whether to save the second rendering mode for ~~said~~ the content,

collecting an indication whether to save the second rendering mode for ~~said~~ the content,

correlating the second rendering mode to an origin of the content, and storing information about ~~said~~ the correlating, if ~~said~~ the indication was affirmative, and

during a next access, using ~~said~~ the information to show a revised version of the content from ~~said~~ the origin, in the second rendering mode instead of the first rendering mode if the indication was affirmative, ~~said~~ the revised version having been revised during a time interval between the accessing and the next access, ~~after said showing of the content according to said second rendering mode, and before said using the information to show the revised version,~~

wherein ~~said~~ the revised version of the content is accessible without a bookmark,

wherein the second rendering mode comprises a normal rendering mode, a re-authored mode, a narrow small screen rendering mode, or comprises an overview according to a thumbnail small screen rendering mode, and

wherein ~~said~~ the revised version of the content has been revised during the time interval between the accessing and the next access ~~between said request to close the content and said next access~~, even if ~~said~~ the indication whether to save the second rendering mode was affirmative.

2. CANCELLED.

3. (Previously Presented) The method of claim 1, wherein the content is accessed via the internet.

4. (Previously Presented) The method of claim 1, wherein the first rendering mode is a default rendering mode that is specified by a provider of the content in source code.
5. CANCELLED.
6. CANCELLED.
7. CANCELLED.
8. CANCELLED.
9. (Original) The method of claim 3, wherein the content accessed via the internet requires downloading an amount of data dependent upon what rendering mode is employed.
10. (Currently Amended) The method of claim 1, wherein the method is performed iteratively, ~~if the user~~ has in case of a change of preference.
11. CANCEL.
12. CANCELLED.
13. CANCELLED.
14. CANCELLED.
15. CANCELLED.
16. CANCELLED.
17. CANCELLED.

18. (Currently Amended) A method comprising:

upon accessing content, displaying the content on a display screen in a first rendering mode,
collecting a selection of a second rendering mode,
showing the content according to ~~said~~ the second rendering mode,
collecting a request to close the content, and subsequently inquiring whether to save the second rendering mode for ~~said~~ the content,
collecting an indication whether to save the second rendering mode for ~~said~~ the content,
correlating the second rendering mode to an origin of the content, and storing information about ~~said~~ the correlating, if ~~said~~ the indication was affirmative, and
during a next access, using ~~said~~ the information to show a revised version of the content from ~~said~~ the origin, in the second rendering mode without further indication of a user preference if the indication was affirmative, ~~said~~ the revised version having been revised during a time interval between the accessing and the next access, ~~after said showing of the content according to said second rendering mode, and before said using the information to show the revised version,~~
wherein ~~said~~ the revised version of the content is accessible without a bookmark,
wherein the second rendering mode comprises a normal rendering mode, a re-authored mode, a narrow small screen rendering mode, or comprises an overview according to a thumbnail small screen rendering mode, and
wherein ~~said~~ the revised version of the content has been revised during the time interval between the accessing and the next access ~~between said request to close the content and said next access~~, even if ~~said~~ the indication whether to save the second rendering mode was affirmative.

19. CANCELLED.

20. (Previously Presented) The method of claim 18, wherein the content is accessed via the internet.

21. (Currently Amended) A computer-readable medium storing a computer-executable code which when executed performs the functions of:

upon accessing content, displaying the content on a display screen in a first rendering mode,
collecting a selection of a second rendering mode,
showing the content according to ~~said~~ the second rendering mode,
collecting a request to close the content, and subsequently inquiring whether to save the second rendering mode for ~~said~~ the content,
collecting an indication whether to save the second rendering mode for ~~said~~ the content,
correlating the second rendering mode to an origin of the content, and
storing information about ~~said~~ the correlating, if ~~said~~ the indication was affirmative, and
during a next access, using ~~said~~ the information to show a revised version of the content from ~~said~~ the origin, in the second rendering mode instead of the first rendering mode if the indication was affirmative, ~~said~~ the revised version having been revised during a time interval between the accessing and the next access, ~~after said showing of the content according to said second rendering mode, and before said using the information to show the revised version,~~
wherein ~~said~~ the revised version of the content is accessible without a bookmark,
wherein the second rendering mode comprises a normal rendering mode, a re-authored mode, a narrow small screen rendering mode, or comprises an overview according to a thumbnail small screen rendering mode, and
wherein ~~said~~ the revised version of the content has been revised during the time interval between the accessing and the next access ~~between said request to close the content and said next access~~, even if ~~said~~ the indication whether to save the second rendering mode was affirmative.

22. CANCELLED.

23. (Previously Presented) The computer-readable medium of claim 21, wherein the content is accessed via the internet.

24. (Currently Amended) A terminal comprising:

means for displaying content on a display screen in a first rendering mode and for subsequently showing the content according to a second rendering mode;

means for collecting a selection of the second rendering mode, wherein the means for collecting is also for collecting a request to close the content, and

means for correlating the second rendering mode to an origin of the content and for storing information about said the correlating, if an affirmative indication is received by the terminal after said the request to close, said the indication indicating whether to save the second rendering mode for said the content,

wherein said the means for collecting is also for subsequently collecting, during a next access, a request to show a revised version of the content from said the origin, in the second rendering mode instead of the first rendering mode if said the indication was affirmative, said the revised version having been revised during a time interval before the next access, ~~after said showing of the content according to said second rendering mode,~~

wherein the second rendering mode comprises a normal rendering mode, a re-authored mode, a narrow small screen rendering mode, or comprises an overview according to a thumbnail small screen rendering mode,

wherein said the means for displaying comprises a display or other hardware, and

wherein said the revised version of the content has been revised during the time interval before the next access ~~between said request to close the content and said next access~~, even if said the indication whether to save the second rendering mode was affirmative.

25. CANCELLED.

26. (Previously Presented) The terminal of claim 24, wherein the content is accessed via the internet.

27. (Currently Amended) A terminal comprising:

display screen configured to display content in a first rendering mode and further configured to subsequently show the content according to a second rendering mode;

user input device configured to collect a selection of the second rendering mode, wherein the means for collecting is also for collecting a request to close the content; and

correlation module configured to correlate the second rendering mode to an origin of the content, and for storing information about ~~said the~~ the correlation, if an affirmative indication is received by the terminal after ~~said the~~ the request to close, ~~said the~~ the indication indicating whether to save the second rendering mode for ~~said the~~ the content;

wherein ~~said the~~ the user input device is further configured to subsequently collect, during a next access, a request to show a revised version of the content from ~~said the~~ the origin, in the second rendering mode instead of the first rendering mode if ~~said the~~ the indication was affirmative, ~~said the~~ the revised version having been revised during a time interval before the next access, ~~after said showing of the content according to said second rendering mode,~~

wherein the second rendering mode comprises a normal rendering mode, a re-authored mode, a narrow small screen rendering mode, or comprises an overview according to a thumbnail small screen rendering mode, and

wherein ~~said the~~ the revised version of the content has been revised during the time interval before the next access ~~between said request to close the content and said next access~~, even if ~~said the~~ the indication whether to save the second rendering mode was affirmative.

28. CANCELLED.

29. (Previously Presented) The terminal of claim 27, wherein the content is accessed via the internet.
